

INFORMATION

GENERAL DESCRIPTION

1. Vertical shaft turbine type fire pumps are used to supply water under pressure for automatic sprinkler, deluge, standpipe, hydrant and foam fire fighting systems. They are primarily intended for use in fire protection installations involving a water supply source below ground level, where the use of a horizontal fire pump is either undesirable or impractical. They are required for installations where suction lifts are involved.
2. The vertical turbine fire pumps covered by this section comply in every respect with the requirements of National Fire Protection Association (NFPA) Pamphlet No. 20. They are listed by Underwriters Laboratories, Inc. (UL), ULC Underwriters Laboratories of Canada, and approved by Factory Mutual Research Corporation (FM).
 - a. Pump is required to deliver a minimum of 150% of rated capacity at 65% of rated head.
 - b. The shut-off pressure may not exceed 140% of the rated head.
 - c. Hydrostatic test is required to twice "the maximum pressure developed at shut-off", but never less than 250 psig. Both the discharge casting and bowl assembly must be so tested.
 - d. Column sections may not exceed 10 feet in length.
 - e. Line shaft may be either open or enclosed. Enclosed line shaft is required when the distance from the pump head to the static water level exceeds 50 feet.
 - f. A non-ferrous strainer is required.
 - g. 1800 rpm is recommended as the maximum pump speed.
 - h. Motors and gears shall be direct connected of the vertical hollow shaft type. The motor or gear shall be equipped with an anti-reverse ratchet.
3. Fire pumps should not be quoted or ordered until the conditions under which they are to be

installed and used have been examined by the insurance authority having jurisdiction. The pump, fittings, driver, control, power supply, water supply, and arrangement must be approved by that organization.

4. The electric motor sizes shown on selection charts conform to standards of NFPA Pamphlet No. 20 being UL Listed and in the case of weather protected, Type 1 motors, are based on full utilization of the 15% service factor. They will usually be acceptable to FIA, and to FM when selections are made from the proper motor column. It is always advisable, prior to quoting, to discuss all aspects of fire pump installation, including motor size, with the authority having jurisdiction. In the case of Factory Mutual jurisdiction, this is a definite necessity.

Since final authority rests entirely with the authority having jurisdiction, Peerless Pump Company can assume no responsibility for their acceptance of motor sizes shown.

The following table for maximum horsepower loading on weather protected Type 1 motors with 1.15 service factors.

| MOTOR hp RATING | MAXIMUM PUMP hp | MOTOR hp RATING | MAXIMUM PUMP hp |
|-----------------|-----------------|-----------------|-----------------|
| 10 | 11.50 | 125 | 143.75 |
| 15 | 17.25 | 150 | 172.50 |
| 20 | 23.00 | 200 | 230.00 |
| 25 | 28.75 | 250 | 287.50 |
| 30 | 34.50 | 300 | 345.00 |
| 40 | 46.00 | 350 | 402.50 |
| 50 | 57.50 | 400 | 460.00 |
| 60 | 69.00 | 450 | 517.50 |
| 75 | 86.25 | 500 | 575.00 |
| 100 | 115.00 | 600 | 690.00 |

INFORMATION *Continued*

5. All list prices are based on factory choice of VHS motor.
Controller manufacturer may be specified at customer's option (Refer to Section 1500/1600).
6. All the selections shown in this section are for sump installation only. ***Refer to the factory if the pump will be installed in a well.*** Advise the expected water level at: 0 - GPM, 100% rated GPM, 150% rated GPM. Changes can be expected in the column and shaft size, discharge head assembly size, down thrust, driver size, type strainer, submergence, number of pump stages, and column construction.
7. It is anticipated that following listed selections will cover approximately 90% of the application requirements. Applications not indicated in the list price selection tables must be referred to the factory. This includes all steam turbine driven fire pump applications.
8. First pick the pump and note the Pump Gear Bhp and Pump Down Thrust and Bare Pump List Price required from following pump selection tables for diesel engines. Then proceed to select the Engine-Right Angle Gear Component Drive Package from following Engine-Right Angle Gear Component Drive Package Selection and Unit List Price tables and select drive package using the pump down thrust value which is to be equal or less than Max/Pump Gear Down Thrust value shown and the Pump/Gear Bhp value which is to be equal or less than Max/Pump Gear Bhp value in component tables. If elevation and temperature do not match values in tables engine Bhp must be derated and check to assure that derated Bhp exceeds Pump/Gear Bhp. See (10) below.
10. For Diesel Engine Bhp table and for engine de-rating information for temperature and altitude refer to pages 48.10 and 48.11 of Section 1610

Pump Selection Information

- 1) The pumps listed on the following selection table pages are suitable for **sump duty installations** when the distance from the static water level to the bottom of discharge head is **50 feet or less**, refer to the factory for special construction pricing adders when this distance is more than 50 feet or when pump is to be installed in a well.
- 2) The pump units are shipped assembled less top shaft, motor or right angle gear when overall length is 20 feet or less.
- 3) Electric motors and right angle gears are normally shipped direct to any location within the contiguous USA with freight charges added to invoice. If order specifies consolidated shipment from factory or is for export or shipment outside contiguous USA, refer to the factory for price additions for incoming freight charges to factory for these items.
- 4) The **BOWL HEAD FEET** (*from selection tables*) = **(DISCHARGE PRESSURE IN PSI) x 2.31 + (DISTANCE FROM DISCHARGE HEAD'S DISCHARGE FLANGE CENTERLINE TO TOP BOWL CONNECTION IN FEET) + (FRICTION LOSS IN FEET FOR COLUMN PIPE AND DISCHARGE HEAD)** (*from Table A on pages 4 or 5 of Section 1610*).

Example:

A UL Listed 2000 GPM motor drive vertical turbine fire pump with discharge pressure of **125 psi** (measured at head discharge flange centerline) and top bowl connection is **9 feet** below head discharge flange centerline.

From selection table on page 24 of Section 1610 a pump model 14MDF is required for 2000 GPM service. The BOWL HEAD FEET required is calculated as follows:

$$(125 \text{ psi} \times 2.31) + 9.0 \text{ Feet} + 1.92 \text{ Feet} = 299.67 \text{ bowl head feet}$$

The nearest bowl head feet selection shown in tables is 300 feet which would require a 200 Hp motor.

- 5) The **MAXIMUM DISCHARGE ASSEMBLY WORKING PRESSURE** = **(SHUT-OFF HEAD IN PSI)** (*from page 24 Section 1610 of selection tables*) - **(DISTANCE FROM HEAD'S DISCHARGE FLANGE CENTERLINE TO OPERATING LEVEL IN FEET)/2.31**

Example:

(*Same as above, from the selection table the shut-off head in psi at bowl head of 300 feet is 164 psi and operating water level is 8 feet below centerline of discharge flange.*)

$$164 \text{ psi} - 8 \text{ Feet}/2.31 = 160.6 \text{ psi}$$

Therefore the 175 psi maximum working pressure discharge head assembly is suitable for the application.

- 6) Vertical turbine fire pumps are constructed having some components of special materials and unit list prices are not subject to deductions for omission of drivers, gears or flexible drive shafts or addition of special materials from vertical pump sales manual. Refer to the factory for pricing of units not conforming to standard unit descriptions.

VERTICAL TURBINE FIRE PUMP MODIFICATIONS

All sizes of vertical turbine fire pumps of the types of construction listed below can be furnished with the **UL** (Underwriters Laboratories) or FM (Factory Mutual) labels. **ULC** (Underwriters Laboratories of Canada) labeled pumps with these modifications **are not available**.

| BOWL ASSEMBLY | UL Listed | FM Approved |
|---|---|--|
| Impellers | SAE 63 Bronze, Ni-Resist, ASTM B148-952 Aluminum Bronze, ASTM B148-955 Bronze, 316 SS, Nickel-Aluminum-Bronze | SAE 63 Bronze, ASTM B148-952 Aluminum Bronze, Nickel-Aluminum-Bronze |
| Bowls | SAE 63 Bronze, Ni-Resist, ASTM B148-952 Aluminum Bronze, ASTM B148-955 Bronze, 316 SS, Nickel-Aluminum-Bronze | - |
| Impeller Shaft | Monel 500K, Nitronic 50 ASTM 276 Stainless Steel | Monel 500K |
| FLANGED COLUMN | UL Listed | FM Approved |
| Column Pipe | SAE 63 Bronze, ASTM B148-952 Aluminum Bronze, Nickel-Aluminum-Bronze, Ni-Resist, Steel Epoxy Coated, 316 SS | SAE 63 Bronze, ASTM B148-952 Aluminum Bronze, Nickel-Aluminum-Bronze, Steel Epoxy Coated, 316 SS |
| Bearing Spiders | SAE 63 Bronze, ASTM B148-952 Aluminum Bronze, Nickel-Aluminum-Bronze, Ni-Resist, 316 SS | SAE 63 Bronze, ASTM B148-952 Aluminum Bronze, Nickel-Aluminum-Bronze, 316 SS |
| Line Shaft | Monel K500, Nitronic 50 ASTM 276 Stainless Steel | Monel 500K |
| Line Shaft Couplings | Monel K500, Nitronic 50 | - |
| DISCHARGE HEAD | UL Listed | FM Approved |
| Discharge Head | SAE 63 Bronze, Ni-Resist, Cast Iron Epoxy Coated, ASTM B148-952 Aluminum Bronze, 316 SS, Nickel-Aluminum-Bronze | Cast Iron Epoxy Coated |
| Packing Box Assembly | SAE 63 Bronze, Ni-Resist, Aluminum Bronze, 316 SS, Nickel-Aluminum-Bronze | Aluminum Bronze, 316 SS, Nickel-Aluminum-Bronze |
| Top Shaft | Monel K500, Nitronic 50 ASTM 276 Stainless Steel | Monel 500K |
| STRAINER | UL Listed | FM Approved |
| Strainer (Basket or cone type) | SAE 63 Bronze, 316 SS | SAE 63 Bronze, ASTM B148-952 Aluminum Bronze, Nickel-Aluminum-Bronze, 316 SS |
| FIRE PUMP FITTINGS | UL Listed | FM Approved |
| Air vent, relief valve, gauges, headers, hose valves & overflow cones | Standard construction (same as fresh water). | Standard construction (same as fresh water). |
| ENGINE | UL Listed | FM Approved |
| Heat Exchanger | Standard heat exchanger is suitable for fresh or sea water service | Standard heat exchanger is suitable for fresh or sea water service |
| Cooling Water Piping | 316 stainless steel piping: bronze strainer and regulator with Monel internal parts | 316 stainless steel piping: bronze strainer and regulator with Monel internal parts |
| Solenoid valve | Solenoid valve will not be furnished. | Solenoid valve will not be furnished. |
| RIGHT ANGLE GEAR | UL Listed | FM Approved |
| Cooling coil | Gear manufacturer's standard for marine service | Gear manufacturer's standard for marine service |
| Cooling piping | 316 stainless steel | 316 stainless steel |
| ENGINE CONTROLLER | UL Listed | FM Approved |
| Wetted Parts | 316 stainless steel | 316 stainless steel |

IMPORTANT

Modifications are limited to items above. Any other modifications such as; cast iron impellers, mechanical seals, etc., **will void the UL, ULC or FM label**.

Modifications are limited to the individual pump capabilities as determined by the Fullerton Proposal Department. Contact the Fullerton Proposal Department to determine which modifications are required. Inquiry must include pump model, rated head and rated flow.

* Motors 400 Hp and above are NOT UL Listed

Pump and Engine Selection Table Information

The diesel engine driven fire pump selection tables are on following pages these have the bare pump pricing.

The *Pump-Gear Bhp* shown is equal to the input Bhp and is 4% greater than the right angle gear rated output Bhp. The right angle gears have a 96% efficiency rating and the Pump-Gear Bhp is shown for proper selection of engine. Select the pump required noting the Pump Gear Bhp required and the Pump Down Thrust lbs. and bare pump list price. Go to the Diesel engine drive component price pages that follow pump selection table pages and select the drive component (Engine, right angle gear and flexible drive shaft) that has right angle gear down thrust value equal to or greater than Pump Down Thrust and a Input Bhp rating value equal to or greater than Pump-Gear Bhp. The jobsite's elevation and ambient temperature should be equal to or less than drive component table Input Bhp captions values. If greater than those values see important note below.

IMPORTANT NOTE

The jobsite's altitude and temperature of air entering the engine's air cleaner must be known before using the selection tables. All engine selections are based on the Bhp rating at 300, 1000, 2000 feet elevation above sea level at an ambient temperature of 77° degrees F. If the jobsite's elevation and temperature are greater than these values, then refer to pages 48.10 and 48.11 for instructions on de-rating engine.

Fire Pump Diesel Engine Selection

The compression ignition diesel engine is the only currently acceptable engine for fire pump service. The engine must be specifically labeled for fire pump service by a nationally recognized testing laboratory. Spark ignited engines fueled with gasoline, natural gas, LPG are not acceptable engines for fire pump service.

Fire pump diesel engines are rated in accordance with the current issue of NFPA Pamphlet No. 20 with the standard conditions of 300 feet (91.4m) altitude, an air temperature entering the engine air cleaner of 77° F. (25° C.) and at the atmospheric pressure of 29.61 inches (752mm) of Hg.. Table No. 1 (on page 48.11) tabulates the listed usable Bhp of the fire pump diesel engines available from Peerless Pump Company which meet these criteria.

The current issue of NFPA Pamphlet No.20 specifies the following engine Bhp derates if fire pump job site's altitude is greater than 300 feet and air temperature entering air cleaner is greater than 77° F.:.

- A. Derate engine listed usable Bhp 3% for each 1000 feet altitude above 300 feet.**
- B. Derate engine listed usable Bhp 1% for each 10° F. above 77° F..**

Table No. 2 (on page 48.12) tabulates the engine derate multiplier factors to be applied to Table No. 1 engine listed Bhp's to calculate the usable engine Bhp when job site's altitude and temperature exceeds 300 feet and 77° F. respectively.

After the pump model is determined from the preceding selection tables and the required pump Bhp is noted, select the engine according to job site's altitude and temperature per one of the following methods:

1. If job site's altitude is 300 feet or less and temperature entering air cleaner is 77° F. or less, select engine from Table No. 1 that has a listed Bhp equal to or greater than required pump Bhp. (See Example No. 1)
2. If job site's altitude is greater than 300 feet and/or air temperature entering the air cleaner is greater than 77° F., refer to Table No. 2 and note the multiplier factor that is to be used for the job site's altitude and/or temperature. Refer to Table No. 1 and select an engine with a listed Bhp closest to but greater than required pump Bhp and multiply by the altitude/temperature factor. If the product is equal to or greater than required pump Bhp, the selected engine may be used. If not, then select the next engine model which has a greater Bhp than the preliminary selected engine and repeat the Bhp calculation procedure. (See Example No. 2)

Example No. 1:

From the selection tables a model 10MAF, 500 GPM, 427 Bowl Head Feet, 1760 Rpm, engine driven fire pump having 86 maximum Bhp, is required for a jobsite altitude of 300 feet with an air temperature of 70° F..

Per Method (1) above the engine can be selected directly from Table No. 1 which would be a Clarke Model PDFPL4YT engine having 92 listed Bhp at 2640 rpm since base altitude and temperature has not been exceeded for the listed Bhp of the engine.

Example No. 2:

From the selection tables a model 10MAF, 500 GPM, 485 Bowl Head Feet, 1760 rpm, engine driven fire pump having 96 maximum Bhp, Is required for a jobsite altitude of 2000 feet with an air temperature of 95° F..

Method (1) cannot be used as base altitude and temperature is exceeded and Method (2) must be used in selecting engine. From Table No 1 a preliminary selection would be a Clarke Model PDFP04YT engine having a listed rating of 100 Bhp at 2640 rpm which has a listed Bhp closest to, but greater than the pump required Bhp. From Table No. 2, the derate factor for application would be .931, therefore, the maximum usable engine Bhp would be 93.1 (100 x .931 = 93.1 Bhp) for the PDFP04YT at 2000 feet altitude and 95° F. temperature. Since the pump requires a maximum of 96 Bhp, the PDFP04YT engine **cannot** be used.

Repeating the selection step, from Table 1, the next available engine with a Bhp greater than the PDFP04YT would be the Clarke Model PDFPL6YN engine having a listed rating of 110 Bhp at 2640 rpm. Using the same derate factor of .931 the maximum usable engine Bhp would be 102.41 (110 x .931 = 102.41 Bhp) for the model PDFPL6YN at 2000 feet altitude and 95° F. temperature which would be suitable for the application.

NOTE: Above examples may not reflect the most economical engine selections.

FIRE PUMP FITTINGS ORDERING INFORMATION

(Read Carefully Before Ordering)

ALL REQUESTED INFORMATION MUST BE SUPPLIED ON APPLICABLE ITEMS

Item No.

4. **Commercial Discharge Tee with 90° Relief Valve Elbow:** Select size depending on local authority having jurisdiction.
5. **Direct Acting Relief Valve:** A "main relief valve" is required for all units connected to an adjustable speed driver (engine or steam turbine). A "main relief valve" may also be required on a constant speed driver (electric motor) if the pump shut off pressure plus the static suction pressure exceeds the pressure for which the system is designed to operate. 3, 4 and 6 inch valves are Kunkle Model 218CS164.

Select the "main relief valve" based on the following.

- a. Pump rated GPM and pump MWP (Maximum Working Pressure) shown in this section.
- b. Valve size and type based on the requirement of local insuring authorities. Some local insuring authorities may require a "direct acting" valve.
- c. **Set range:** The "main relief valve" should be set to open at a pressure slightly higher than the normal operating pressure of the pump.
- d. A "direct acting relief valve" will start to open and drip at approximately 80% of the set pressure. A valve set at 170 psi will start to drip at approximately 136 psi.

6. **Pilot operated Relief Valve:** A "main relief valve" is required for all units connected to an adjustable speed driver (engine or steam turbine). A "main relief valve" may also be required on a constant speed driver (electric motor) if the pump shut off pressure plus the static suction pressure exceeds the pressure for which the system is designed to operate. Valve sizes manufacturers' that may be selected are Watts-Muesco Model 1116FM , OCV 108FCA , Cla-Vlal 50B4KG-1 angle pattern valves.

Select the "main relief valve" based on the following.

- a. Pump rated GPM and pump MWP (Maximum Working Pressure) shown in this section.
- b. Valve size and type based on there requirement of local insuring authorities. Some local insuring authorities may require a "pilot operated" valve. Note the UL listing and FM approval status of pilot operated valves.
- c. **Set range:** The "main relief valve" should be set to open at a pressure slightly higher than the normal operating pressure of the pump.
- d. A "pilot operated relief valve" will start to open and drip at approximately 98% of the set pressure. A valve set at 170 psi will start to drip at approximately 166 psi.
- e. When piping two (2) or main relief valves into a common header, direct acting relief valves should be used. Pilot operated relief valves are not suitable because reverse flow can result through the valve which is not operating. If pilot operated valves are used, a check valve must be installed to prevent reverse flow.

FIRE PUMP FITTINGS
ORDERING INFORMATION
—continued—

Item No.

7. **Overflow Cone:** Select size depending on relief valve size. One design is of the enclosed overflow type with sight glass. Maximum allowable back pressure is 100 psi.

9. **Hose Valve Head:** Select size depending on GPM and number of hose valves required. When the pipe between the hose valve head and connection to the pump discharge pipe is over 15 feet in length, the next larger pipe size must be used (NFPA Pamphlet #20 paragraph 2-14.3.4).

10. **Angle Type Hose Valves with Caps and Chains:**

Select hose valve thread as required by local authority.
The factory has threading details on the following standards:
A. National Standard Threads
(The following require price adder for special threading)
B. Chicago Fire Department Standard Hose Threads
C. Toledo Standard Thread
D. New York Corporation Standard Thread
E. Detroit Fire Department Thread
F. Cleveland Standard Thread
G. Akron Standard Thread
H. Cincinnati Old Standard Thread
I. Iron Pipe Standard

If any other than above threading is required, full threading details (sketch, drawing or template) (drawing preferred) must be furnished.

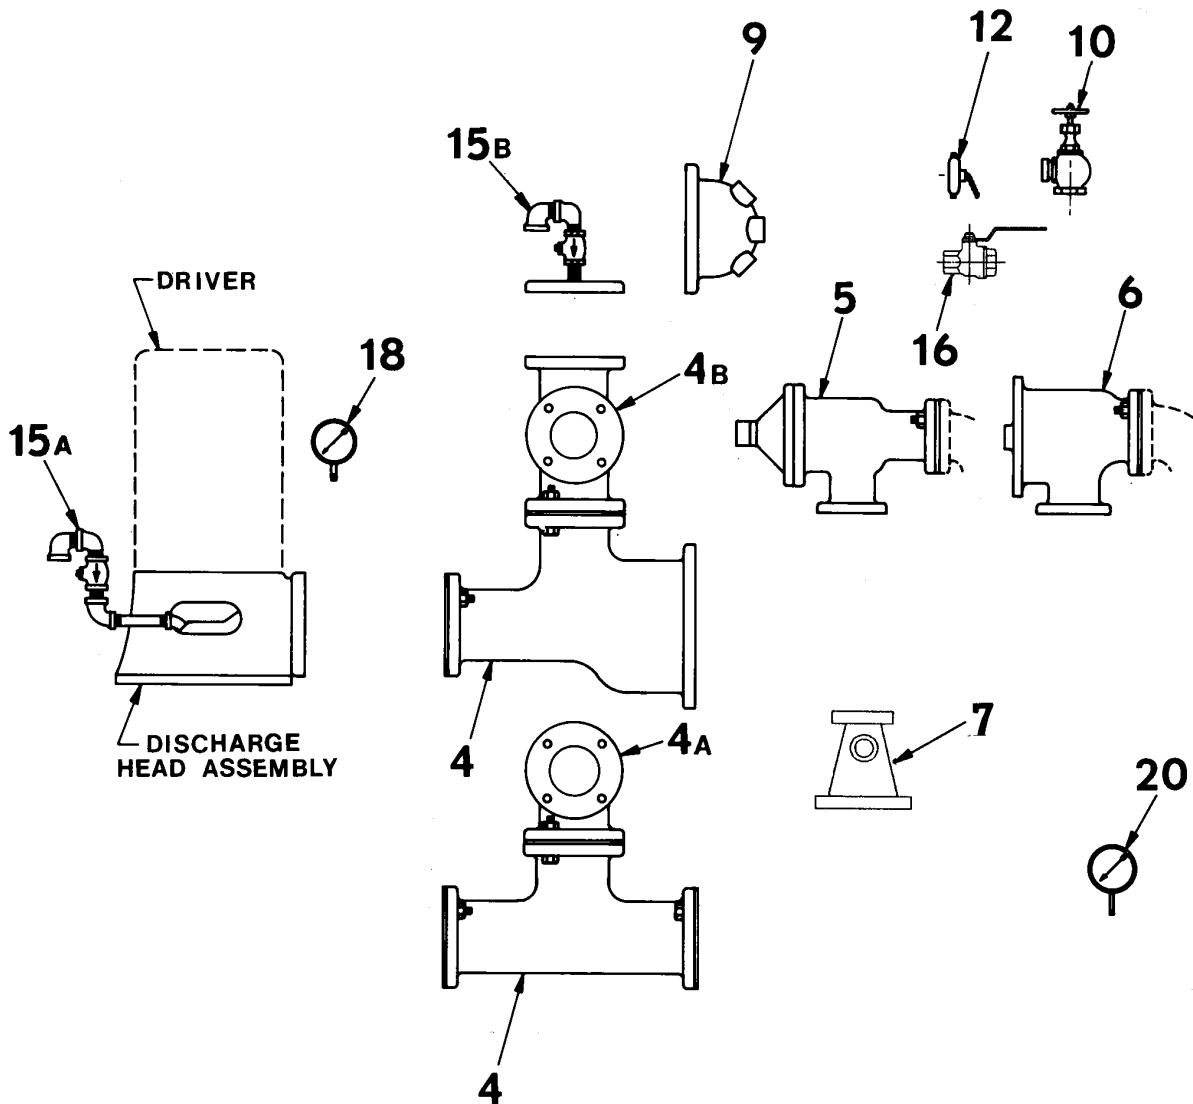

15A. & 15B **Automatic Air Release Valve:** This is a 1-1/2 or larger swing check valve mounted in the inverted position to vent air when the pump is started and to eliminate a vacuum condition when the pump is stopped. Select components 15A for motor driven units and 15B for engine driven units.

16. **Drain Valve:** Required on outside hose valve head (Item 9) when branch line is subject to freezing. Formerly was Ball Drip Valve.

18. **Discharge Gauge:** Required by NFPA Pamphlet 20. Discharge Gauge range is 0-300 PSI on 175 PSI MWP fittings and 0-600 PSI on 300 PSI MWP fittings. Gauges are 3.5 Inches In diameter and are furnished with gauge cocks and necessary pipe fittings to connect to pump flanges.

18. **Water Level Testing Device:** Required on all well installations, may be used for sump installations. This device consists of an altitude gauge, hand pump, fittings and up to 50 feet of copper tubing.

ITEM NO. DESCRIPTION

| | |
|---|--|
| 4 Commercial Discharge Tee* | 4A Relief Valve Elbow |
| 4B Relief Valve Tee | 5 Direct Acting Relief Valve |
| 6 Pilot Operated Relief Valve | 7 Overflow Cone * |
| 9 Hose Valve Head * | 10 Angle Hose Valve |
| 12 Hose Valve Cap & Chain | 15A Automatic Air Release Valve Motor Driven |
| 15A Automatic Air Release Valve Engine Driven | 16 Drain Valve |
| 18 Discharge Gauge | 20 Water Level Testing Device |

* At Peerless Pump Company's option, these items may be furnished of fabricated steel.

GENERAL: The pumps furnished for fire protection service shall be supplied with the specified drivers, controls and pump accessory items by the pump manufacturer. The pump, driver and control shall be

Underwriters Laboratories (UL) Listed

Factory Mutual Research Corporation (FM) Approved

Underwriters Laboratories-Canada (ULC) Listed for fire protection service. The pumping equipment shall be installed as recommended in the National Fire Protection Association (NFPA) Pamphlet 20, Standard for the Installation of Centrifugal Fire Pumps. The fire pump shall be designed to deliver _____

_____ U.S. gallons per minute (gpm) at a total differential pressure of _____ psi. The fire pump shall also be capable of delivering not less than 150% of rated flow at not less than 65% rated head. Peerless Pump model _____ shall be furnished with driver, controllers and accessories as detailed in this specification. Pump manufacturer shall have unit responsibility for the proper operation of the complete unit assembly as indicated by field acceptance tests.

MANUFACTURER'S FACTORY TESTS: Each individual pump shall be run tested prior to shipment. Vertical turbine bowl and discharge head assemblies shall be hydrostatically tested at a pressure not less than one and one-half times the no flow (shut off) head of the pump's maximum diameter impeller but in no case less than 250 psig.

FIELD ACCEPTANCE TEST: A field acceptance performance test shall be conducted upon completion of pump installation. The test shall be made by flowing water through calibrated nozzles, approved flow meters or other such accurate devices as may be selected by the authority having jurisdiction. The test shall be conducted as recommended in NFPA Pamphlet 20 by:

the installing contractor

the owner

the owner's representative

(other) _____

in the presence of the authority having jurisdiction and with that authority's final approval and acceptance. Failure to submit documentation of factory and field tests will be just cause for equipment rejection.

VERTICAL TURBINE PUMPS: The fire pump shall be a Peerless Pump model _____ vertical shaft turbine pump. The pump shall be specifically labeled for fire service (underground fire main) system. The water supply for the fire pump shall be from

a water well of style, dimension and water productivity as recommended in NFPA 20.

a sump or equivalent intake structure of style, dimension and water capacity as recommended in NFPA Pamphlet 20.

The total installed length of the pump from bottom of baseplate to bottom of suction inlet manifold shall be _____ feet. The pump discharge head assembly shall be cast iron and fitted with a _____ inch discharge connection machined to American National Standards Institute (ANSI)

125 pound rating dimensions

250 pound rating dimensions

The pump discharge head shall provide rigid mounting support for the complete pump assembly and for the

vertical hollow shaft motor (*electric motor driven pumps*)

right angle gear drive (*diesel engine driven pumps*)

The pump line shaft bearings shall be

Typical Specifications

- water lubricated by the liquid being pumped (*for static water levels up to 50 feet*)
- oil lubricated with bronze bearings contained in enclosing tubing (*for static water levels 51 feet and greater*)

Pump column pipe (and oil tube when applicable) shall be in sections not longer than 10 feet each. Pump bowl assemblies shall include cast iron enameled bowls, cast bronze impellers and bowl lateral seal rings. Pump bowl assemblies shall be submerged as recommended in NFPA Pamphlet 20. Each pump shall be installed with a cast or fabricated nonferrous metal strainer having a free area of not less than four times the suction inlet area. Strainer openings shall be sized to restrict the passage of objects one-half inch sphere size.

ELECTRIC MOTORS: The pump driver shall be a vertical hollow shaft induction motor rated _____ horsepower, 3 phase, 60 Hertz with weather protected type 1 NEMA enclosure for operation on _____ volt service.

The motor locked rotor current shall not exceed the values stated in NFPA Pamphlet 20. The motor shall be constructed so that the total hydraulic and static thrust of the pump's rotating assembly can be carried by the motor thrust bearing(s). The motor shall mount directly on the pump discharge head assembly with a registered fit for correct shaft alignment. The motor shall be equipped with a top drive coupling and nut for axial adjustment of the pump impellers and shall have a non-reverse ratchet to prevent pump back-spin.

ELECTRIC MOTOR CONTROLLERS: The automatic electric motor controller shall be (UL listed)(FM approved)(ULC listed) specifically for fire pump service. The controller shall be designed for

- full voltage
- part winding
- primary resistance reduced voltage
- wye-delta open transition
- wye-delta closed transition
- auto-transformer
- solid state (soft start)

type starting. The controller shall be rated for the horsepower specified in this specification's electric motors section. The controller shall be capable of interrupting a short circuit current at least equal to the available short circuit current in the controller supply circuit. This fire pump controller installation requires an withstand rating of not less than _____ amps RMS symmetrical at an operating voltage of _____ volts.

The controller shall be:

- floor or wall mounted for electrical connection to the motor by the equipment installer.
- mounted on a common base with the fire pump and wired to the motor by the pump manufacturer.

FITTINGS: The pump manufacturer shall furnish piping accessory items for the pump installation which will adapt the pump connections to the fire protection system and test connection as follows. Fittings subjected to pump discharge pressure shall be ANSI (125)(250) pound rating. Fittings subjected to suction pressure shall be ANSI 125 pound rating.

- eccentric tapered suction reducer
- concentric tapered discharge increaser
- hose valve test header
- hose valves with caps and chains
- automatic air release valve
- hose valve head drain valve
- suction and discharge pressure gauges

Additional accessories required when pump is engine or steam turbine driven:

- main relief valve:
 - direct acting (spring actuated)
 - pilot operated (hydraulically actuated)
 - relief valve overflow cone, enclosed type

GEAR DRIVES: Engine driven vertical turbine pumps shall be furnished with a vertical hollow shaft right angle gear. The drive shall be direct connected to the pump shaft and be equipped with a non-reverse ratchet. The drive shall be connected to the engine by an approved flexible universal joint type drive shaft with an enclosing guard as recommended in NFPA Pamphlet 20. The driver shall have provision for adjusting the pump impeller lateral setting for proper pump operation and performance.

DIESEL ENGINES: The pump driver shall be a horizontal shaft type internal combustion engine model _____ manufactured by: _____ rated at _____ rpm, clockwise rotation viewed from the end opposite the pump. The engine shall be provided by the pump manufacturer with, at a minimum, the following accessories for automatic operation.

- Peerless Pump Model 4000 Mantrol UL listed emergency manual operator, factory wired and mounted on the engine junction box for standby engine starting and operation in case of main controller or interconnecting wiring malfunction.
- cooling waterlines, pressure regulator, strainer, bypass lines and necessary fittings for engine cooling system, pre-piped and factory mounted.
- flexible exhaust connector
- residential exhaust silencer
- engine jacket water heater, factory installed.
- one set dual batteries, lead acid storage type.
- fuel system as recommended in NFPA Pamphlet 20
- fuel storage tank sized to provide a minimum supply of one gallon of fuel per engine maximum rated horsepower plus 5% for sump area plus 5% for expansion area. The tank shall be furnished (with)(without) legs for floor mounting and with a direct reading level gauge. The fuel tank shall (single wall)(dual wall) UL listed; single wall non-listed

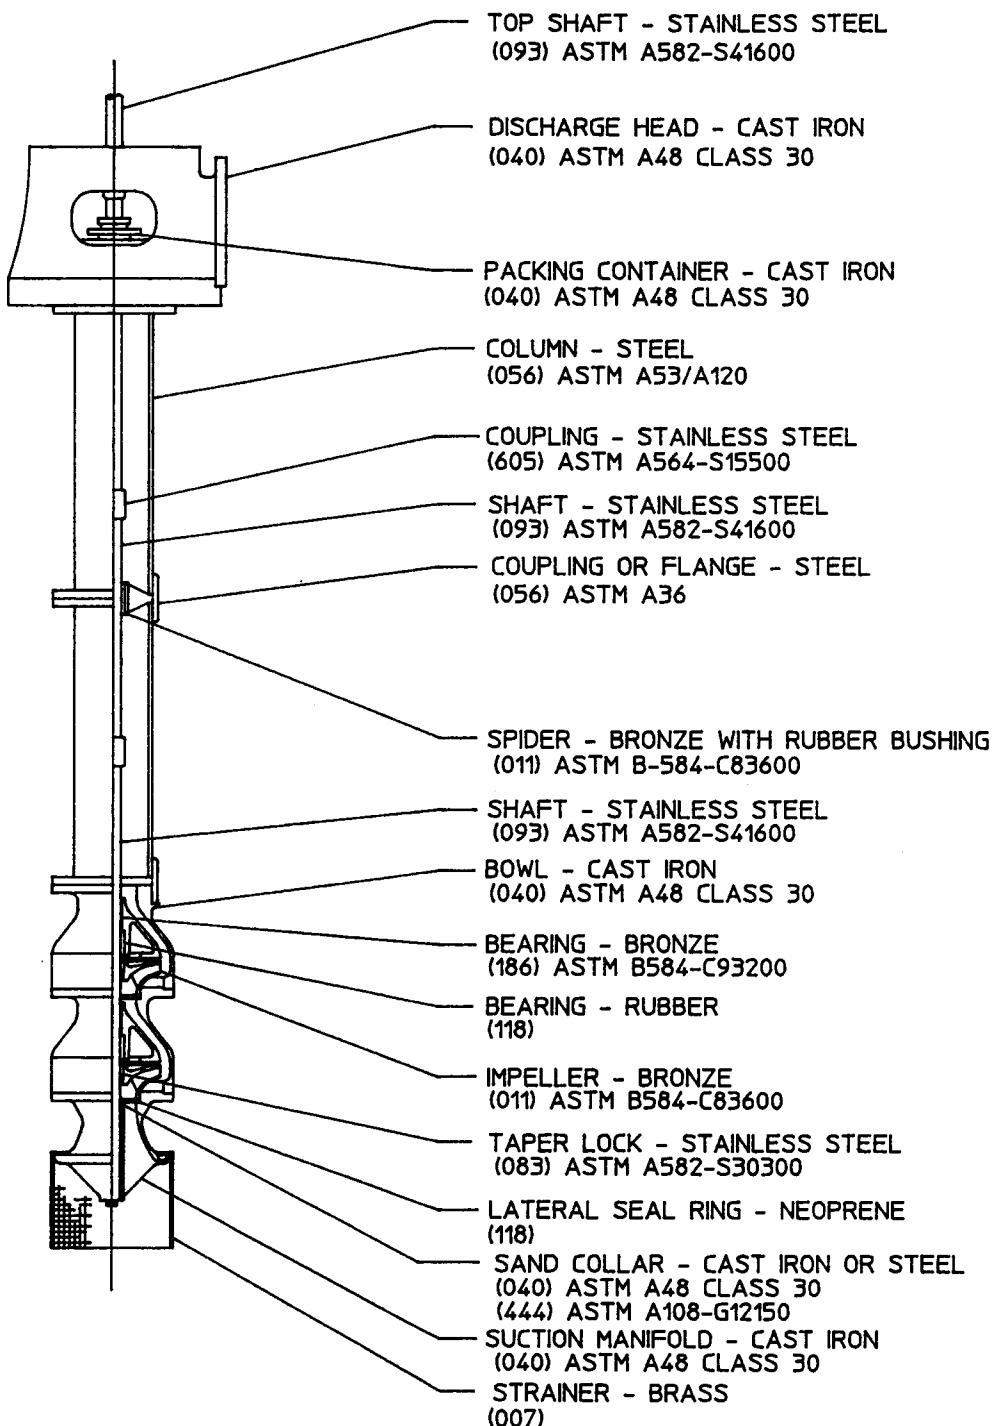

ENGINE CONTROLLERS: The automatic engine controller shall be (UL listed)(FM approved) specifically for fire pump service. The controller must be capable of performing or contain the following features:

- built in battery charger
- time clock for weekly automatic test
- system pressure recorder
- timing relay for automatic stop
- power failure start
- low fuel level switch
- pump room alarm audible and visual signals
- The controller shall be wired to the corresponding engine function terminals and shall be mounted on a common base with the engine and pump. A complete running test of the base mounted controller, engine and pump shall be performed by the pump manufacturer prior to shipment.
- The engine controller shall be floor mounted for electrical connection to the engine by the equipment installer.
